

```
#!/bin/bash
```

```
# Set the application name and version
```

```
APP_NAME="my-app"
```

```
APP_VERSION="1.0.0"
```

```
# Set the deployment directory
```

```
DEPLOY_DIR="/opt/${APP_NAME}-${APP_VERSION}"
```

```
# Clone the Git repository to get the latest version
```

```
git clone https://github.com/my-username/my-app.git /tmp/my-app
```

```
# Update the date and time in the application files
```

```
DATE_TIME=$(date +"%Y-%m-%d %H:%M:%S")
```

```
sed -i "s/{{DATETIME}}/${DATE_TIME}/g" /tmp/my-app/index.html
```

```
# Stop the JBoss server
```

```
sudo service jboss stop
```

```
# Remove the old deployment directory
```

```
sudo rm -rf $DEPLOY_DIR
```

```
# Create the new deployment directory and copy the application files
```

```
sudo mkdir -p $DEPLOY_DIR
```

```
sudo cp -R /tmp/my-app/* $DEPLOY_DIR/
```

Start the JBoss server

```
sudo service jboss start
```

Cleanup

```
rm -rf /tmp/my-app
```
